Dear Phil,

In regards to the near completion of the water facility located at the top of Festival and Stanton Streets – BRAVO!

When work first began on this project, Link and I were skeptical as to the nature of the outcome as far as aesthetics was concerned. Having just bought property and built a home in the vicinity, we have watched this project develop with keen interest. On a personal note, of course, we were much encouraged when we learned that Bath Engineering under your guidance was heading up the project because we trusted that you would be sensitive to all the things that were important to us as area homeowners.

And you did not let us down. I walk by that project every day, have visited with the very courteous workers, watched the handsome rock work hide what is so often an awful eyesore, and delightedly observed the original desert foliage being replanted. The planning and completion of this facility indicates much insightful thought, responsible planning and beautiful execution.

I personally cannot thank you enough. Link joins me in sending you accolades on a job well done. And I might mention that although you might not hear from our neighbors, this has been a topic of conversation in the area and compliments abound. Additionally, our grown daughter and husband just moved back to El Paso from Houston and they have commented on the job very favorably—clearly this is the sort of thing that makes them pleased they chose to return to the city they love.

Thank you for making us all proud. Pat yourselves on the back for a job well done and very much appreciated.

Very sincerely,

Concetta Beck
